FIRE DAMPERS S2 & S4 ENGINE ROOM

HEATER FRESH WATER PUMP - CCWS LT 3 - STANDBY

SPARE

The diagram illustrates the 24VDC power supply system for the emergency generator. It shows the distribution of 24VDC power from a main source to various components, including a transformer, diodes, fuses, and terminal blocks. The system is divided into two main sections: a power distribution section on the left and a component connection section on the right.

Power Distribution Section (Left):

- 24VDC Input:** The main power source at the top.
- 01 U1 /23.09 ==22A2/12.09 230VAC//18-29,5VDC 10A:** A transformer with a primary winding connected to the 24VDC input and a secondary winding connected to the 24VDC output.
- 01 D3, 01 D4:** Diodes connected to the transformer's secondary winding.
- 01 K1 24VDC 24VDC ON:** A diode bridge rectifier.
- 01 X2, 01 X3:** Terminal blocks for the power distribution.

Component Connection Section (Right):

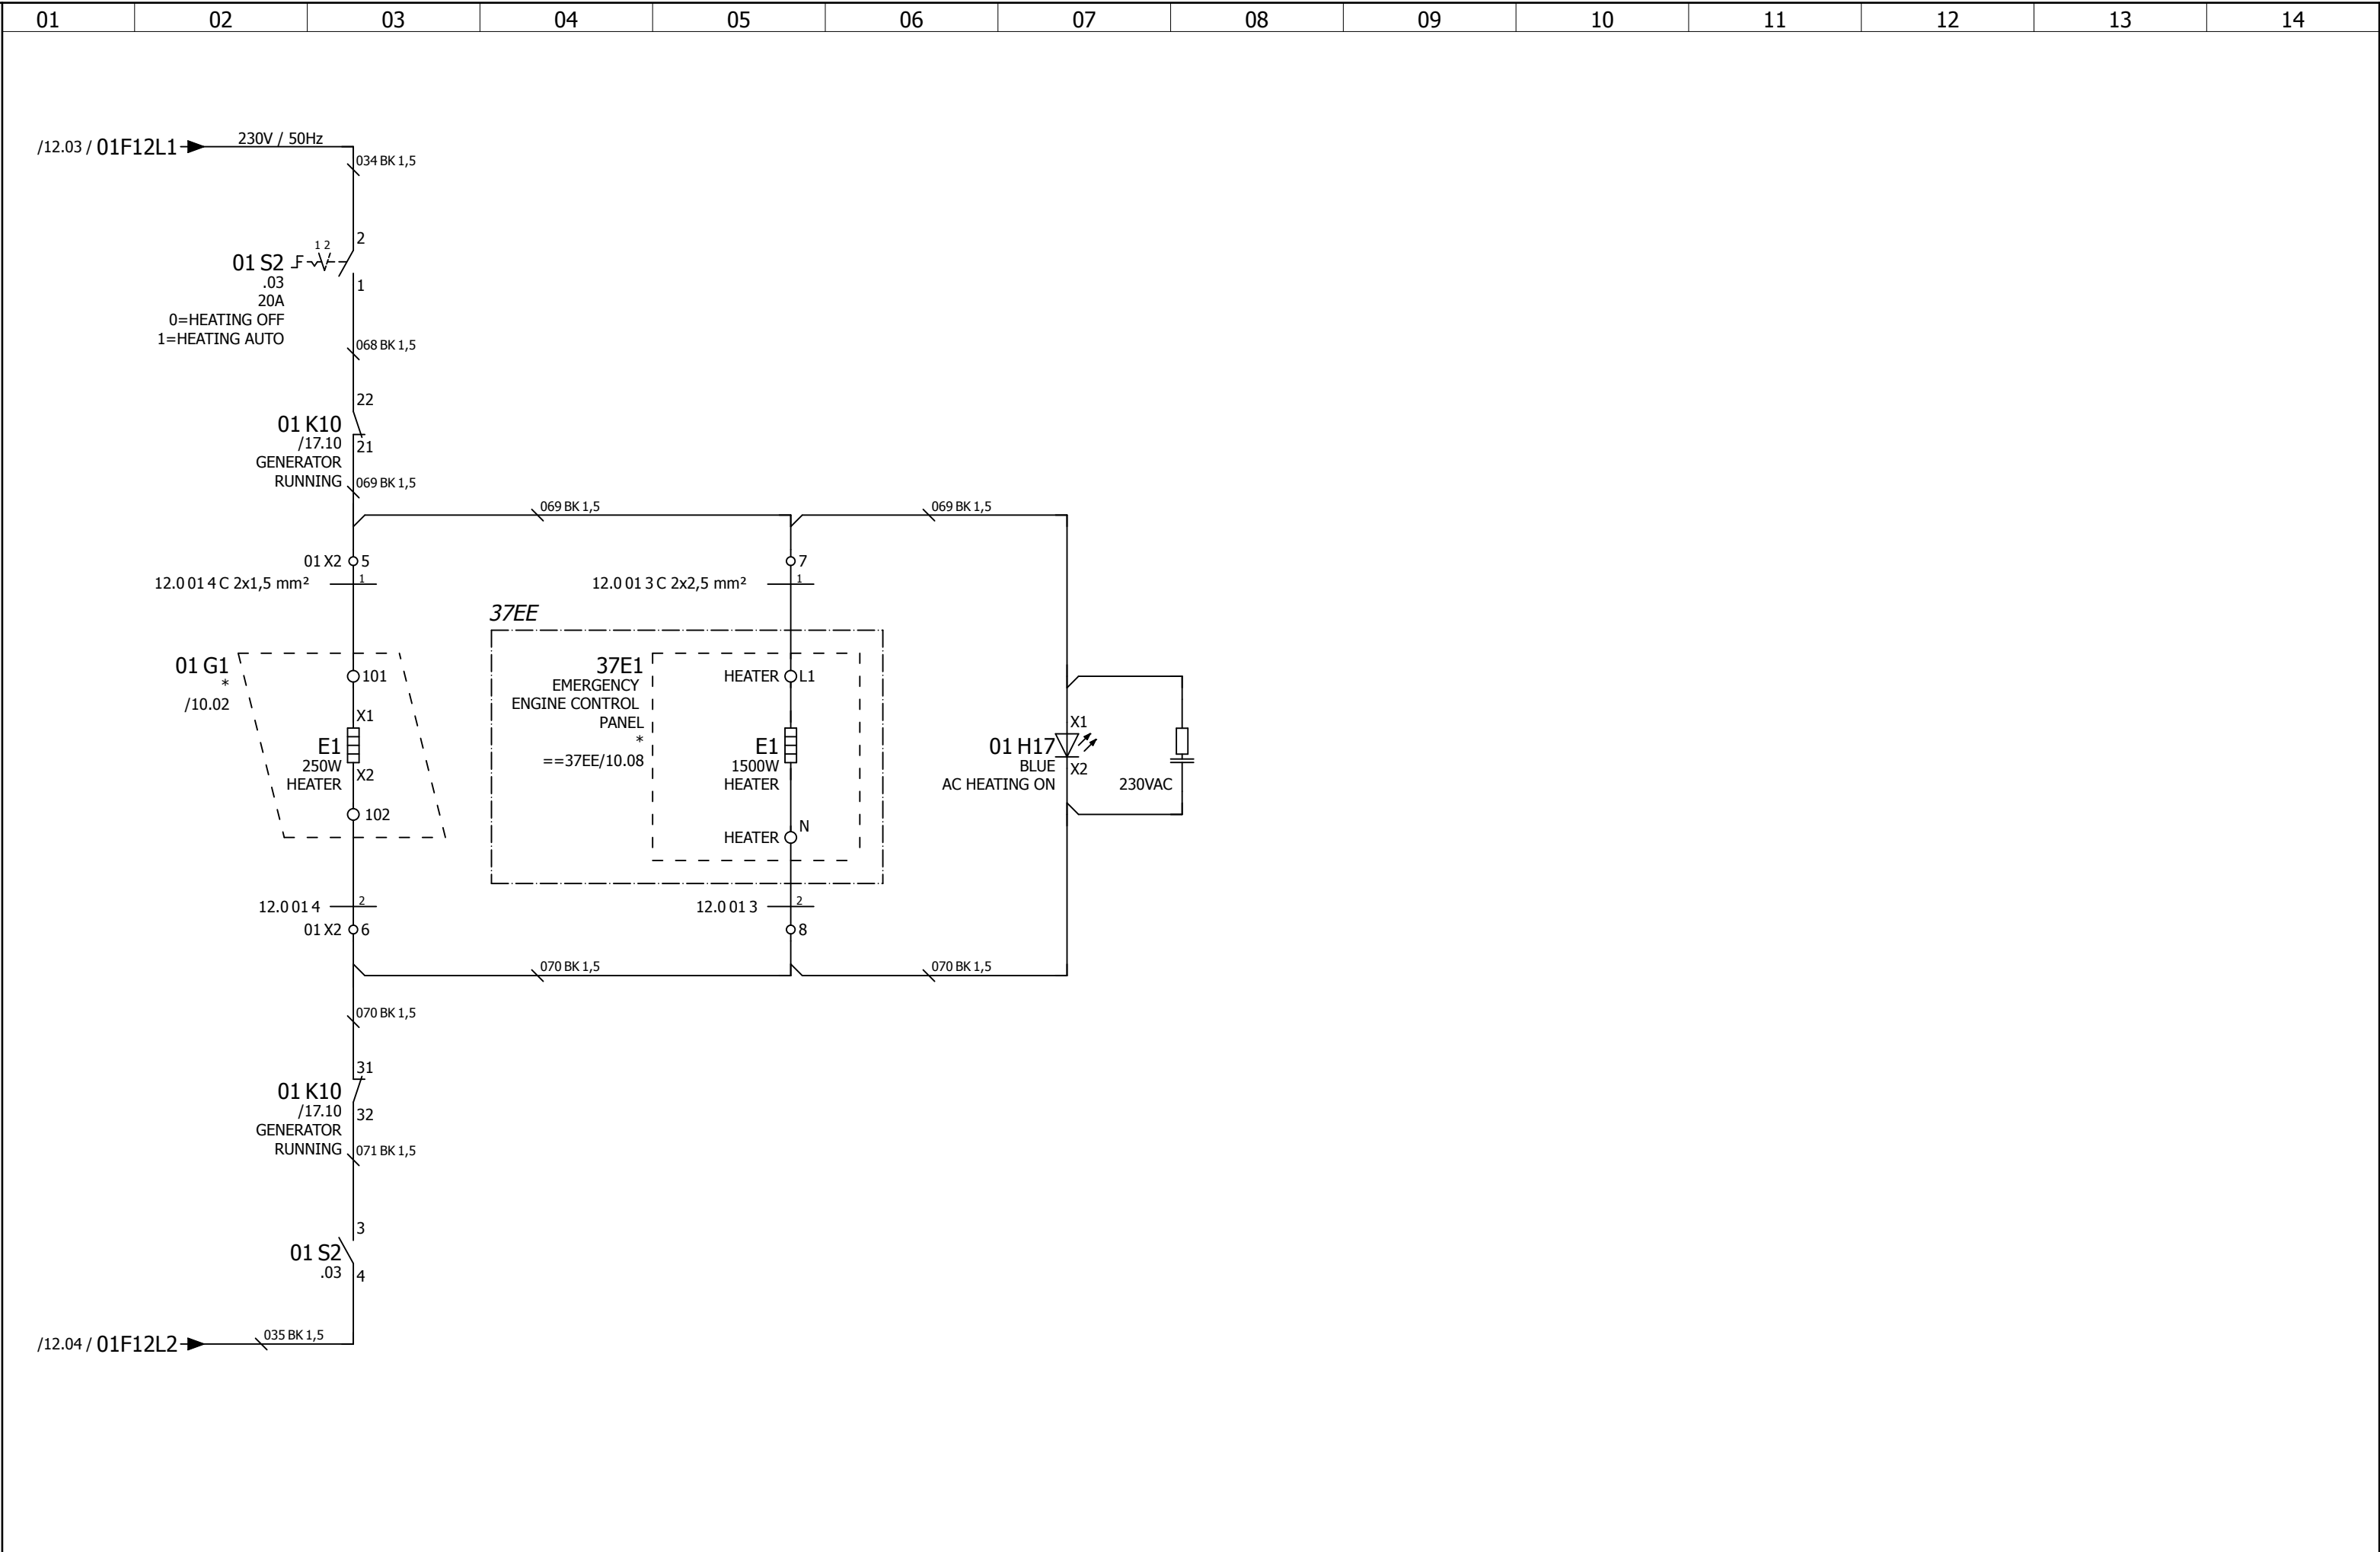

- 01 D1, 01 D2:** Diodes connected to the 24VDC input.
- 01 F13, 01 F14, 01 F15, 01 F16:** Fuses connected to the 24VDC input.
- EMERGENCY GENERATOR CONTROL, EMERGENCY GENERATOR SIGNALING, EMERGENCY GENERATOR PROTECTION, EMERGENCY GENERATOR MEASURING:** The components receiving power from the fuses.

The diagram includes numerous component labels, wire numbers, and terminal connections, providing a detailed view of the power supply system's wiring and component placement.
